Section 003 of Calculus Lab 2,
Quiz of January 28, 2003
10:00-10:15 a.m.

1. Carefully print MATHEMATICA input commands (one or two in number) for the evaluation of

$$\lim_{x\to 0}\frac{e^{(x^5)}+e^{(x^7)}-2-x^5-x^7}{x^{10}}.$$

(In particular, since palettes are not available, write  $x^5$  for  $x^5$  etc.)

2. For the function f(x) defined by

$$f(x) = \frac{x^{17}e^x \sin x}{x^2 + 1}$$
, for any rreal number x,

- (a) print a suitable MATHEMATICA Input statement whose evaluation defines this function for the MATHEMATICA kernel;
- (b) carefully print a MATHEMATICA Input statement for the direct evaluation of  $\lim_{h\to 0}\frac{f(a+h)-f(a)}{h};$

(c) carefully print a MATHEMATICA Input statement whose evaluation yields the seventeenth derivative  $f^{(17)}(x)$  of f(x).
