Table of Contents

Introduction v
Lecture Topics v
Exercises and Symbolism x
Part 1. The Logic of Terms 1
Lecture 1. The Problem of Universals 1
Parmenides: The One and the Many 1
Truth-Conditions for Subject-Predicate Sentences and their Negations 5
Explanation of Sameness and Difference 6
Explanation in Logic 7
What is a Theory? 7
Mathematical Rigor 8
Parsimony 8
Empirical Confirmation 9
Conceptual Adequacy 10
Plato's Theory of Ideas 12
Plato's Truth-Conditions for Subject-Predicate Sentences 14
Explanation of Sameness and Difference 14
The Correspondence Theory of Truth 14
Definition and Division, Necessity and Contingency 15
Relations 17
Epistemology and Ethics 18
The Third Man Argument and Parsimony 19
Lecture 2. Aristotle and Mediaeval Logic 23
Aristotle's Ontology of Matter and Form 23
The Categories 26
The Predicables 28
Matter and Form 30
The Standard Form of a Real Definition 30
The Tree of Porphyry 31
Concept Formation: Perception and Abstraction 33
Mental Language 36
Truth-Conditions for Subject-Predicate Sentences 39
Relations 40
Spoken Language; Real and Nominal Definitions 42
The Realism Nominalism Debate 43
Lecture 3. Naïve Set Theory 47
The Motivation for Set Theory 47
Abbreviative and Implicit Definitions 49
Abbreviative Definitions 49
Implicit Definitions 51
The Axioms of Naïve Set Theory 52
The Principle of Extensionality 53
Principle of Abstraction 54

Abbreviative Definitions 57
Set Abstracts 57
Defined Relations on Sets 58
Defined Sets and Operations on Sets 58
The Problem of Universals 59
Truth-Conditions for Subject-Predicate Sentences and their Negations 59
Explanation of Sameness and Difference 60
Lecture 4. Set Theory as an Axiom System 61
Proofs 61
Inference Rules 63
Logical Truths 64
Sentential Logic Rules 65
Quantifier Rules 66
Substitution Rule 67
Subproof Rules 68
Statement of the Axiom System 71
Summary of the System 71
Axioms 71
Rules of Inference 71
Abbreviative Definitions 71
Definition of Proof 72
Theorems 73
Lecture 5. Proofs of the Theorems 74
Russell's Paradox 86
Axiomatized Set Theory 89
Lecture 6. Relations, Structures and Constructions 92
Reduction of Relations to Sets 92
Truth-Conditions for Relational Sentences and their Negations 96
Explanation of Sameness and Difference of Relational Pairs 97
Properties of Relations and Order 97
Functions 99
∗Abstract Structures 100
Construction and Inductive Definitions 103
Definitions by Necessary and Sufficient Conditions 103
Inductive Definitions and Sets 106
The Natural Numbers 108
Proof by Induction 112
Construction Sequences 112
Appendix I. Inference Rules 116
Sentential Logic Rules 116
Quantifier Rules 116
Substitution Rule 116
Subproof Rules 116
Appendix II. Naïve Set Theory 117
Axioms 117
Abbreviations 117

Logical Symbols 117
Theorems 117
Summary of Exercises 118
Lecture 5 118
Lecture 6 122
Review Questions 123

Part 2. The Logic of Propositions 1
Introduction 1
Lecture 7. Categorical Propositions 2
Plato: Discourse as the Interweaving of Nouns and Verbs 2
Aristotle's Categorical Propositions 4
Syntax and Semantics for the Syllogistic 9
Formal Syntax 11
Semantic Intuitions 11
Formal Semantics 14
Summary 19
∗Predicate Negation 20
Extension of the Syntax and Semantics 20
Terms with Empty Extensions 21
Lecture 8. Propositional Logic 26
Ancient and Mediaeval Logic 26
Simple and Complex Sentences 26
Hypothetical Propositions 27
Sentential Syntax 29
Modern Symbolic Notation 29
Formation Rules, Generative Grammar, Inductive Sets 32
Grammatical Derivations 34
Truth-Functionality 37
Truth-Tables for the Connectives 37
Negation 37
Translating English using $\sim$ 38
Disjunction 39
Translating English using $\vee$ 39
Conjunction 40
Translating English using $\wedge$ 40
The Conditional 41
Translating English using $\rightarrow$ 41
The Biconditional 46
Translating English using $\leftrightarrow$ 46
General Remarks on Translating using the Propositional Connectives 47
Summary 50
Lecture 9. The Inductive Definition of Truth 51
Sentential Semantics 51
Tarski's Correspondence Theory for Complex Grammars 51
The Strategy for an Inductive Definition 55
Interpreting Negations 56
Interpreting Disjunctions 57
Interpreting Conjunctions 58

Interpreting the Conditional 58
Interpreting the Biconditional 59
The Inductive Definition of Interpretation 59
Truth-Conditions 61
General Truth-Functions 61
Satisfaction of Tarski's Adequacy Condition 64
Calculating Sentence Values by Truth-Tables 66
Examples of Truth-functional Computation and Truth-Tables 68
The Definition of Logical Concepts 72
Summary 74
Lecture 10. First-Order Logic 76
Expressive Power 76
Simple and Complex Sentences in a Single Syntax 76
The Limitations of the Syllogistic and Propositional Logic 78
New Notation: Constants, Predicates and the Quantifiers 81
Syntax for First-order Logic 83
Definition of Well-Formed Formula 83
Informal Semantics 87
Quantifiers and Models 87
Unrestricted Quantifiers 88
Universal Affirmatives 88
Particular Affirmatives 90
Distribution of the Quantifiers over Connectives 92
Embedded Quantifiers 94
Syllogisms in Modern Notation 94
Properties of Relations 95
Lecture 11. Formal Semantics for First-Order Logic 96
Intuitions about the Truth-Conditions of Each Formula Types 96
Atomic Formulas 96
Molecular Formulas: The Connectives 98
Quantified Formulas 98
The Inductive Definition of Interpretation 100
Introduction 100
Formal Definitions 101
Simultaneous Induction and Impossibility of Truth-Tables 102
Tarski's Adequacy Condition 105
Calculating Truth-Values Using Truth-Conditions 106
The Technique 106
Examples 108
The Correspondence Theory of Truth for First-Order Logic 114
The Definition of Logical Concepts 116
Summary 117
Summary of Exercises 119
Lecture 7 119
Lecture 8 119
Lecture 9 120

Lecture 10 121
Lecture 11 122
Review Questions 123

Part 3. The Logic of Arguments 1
Introduction 1
Lecture 12. Validity, Consistency, and Logical Truth 5
Semantic Entailment 5
The Semantic Definition of Validity 5
Showing Arguments are Valid 7
Schema for Proofs of Validity 10
Showing Arguments are Invalid 10
Consistency 13
The Semantic Definition of Consistency 13
Interdefinablity of Consistency and Validity 14
Logical Truth 15
The Semantic Definition of Logical Truth 15
Interdefinablity of Validity, Consistency and Logical Truth 15
Lecture 13. Categorical Logic: Validity 17
Categorical Logic 17
Immediate Inference 20
The Square of Opposition 23
∗The Logic of Empty Terms and Negations 26
Obversion 27
Terms with Empty Extensions 28
Formal Syntax and Semantics 28
Square of Opposition for Predicate Negations 31
The Syllogistic 32
Basic Concepts 32
Proving Syllogisms are Valid 35
Proofs of the Validity of Selected Syllogisms 36
The Names for the Valid Moods 39
∗Lecture 14. Categorical Logic: Invalidity 42
Traditional Term Rules for Invalid Syllogisms 43
Definition of Distribution 44
Leibniz's Term Rules 45
Examples of Applications of the Rules 46
Rule 1. Undistributed Middle 46
Rule 2. Distributed Term in the Conclusion 48
Rule 3. Affirmative premise 49
Rule 4. Negative Conclusion 50
Rule 5. Particular Premise 51
Rule 6. Negative Premise 52
Rule 7. Universal Premise 54
∗Syllogism with Empty Subject Terms 55
Summary 58

Lecture 15. Propositional and First-Order Logic: Validity 60
Propositional Logic 60
The Truth-Table Test for Validity 60
Examples 61
Proving Invalidity by Truth-Tables 62
Showing Consistency and Inconsistency 64
First-Order Logic 65
Validity and Logical Entailment 65
Examples of First-Order Validity Metatheorems 69
Proofs of the Metatheorems 70
Lecture 16. Proof Theory 74
The Axiomatic Method 74
Euclid's Postulates for Plane Geometry 75
Newton's Three Laws of Motion 77
Spinoza's Philosophical Axioms 78
Non-Euclidean Geometry 79
Playfair's Version of Euclid's Fifth Postulate 80
Postulate 5 in Lobachevskian Geometry 80
Postulate 5 in Riemanninan Geometry 81
Axiom Systems and Proofs 83
Axiom System 87
Derivation 88
Certainty 89
Soundness and Completeness 90
Definitions 91
Summary 93
Lecture 17. Reductions to the Perfect Syllogisms 95
Syllogistic Reduction 95
Transposition 96
Simple Conversion 96
Accidental Conversion 97
Reduction to the Impossible 98
The Reduction System 99
Examples of Reductions: Proofs 101
Lecture 18. Propositional and First-Order Logic: Proof Theory 106
Introduction 106
Proof Theory for Propositional Logic 107
Substitution 107
Łukasiewicz's Axiom System 109
Examples of Proofs 110
Defining "Derivability" in the Axiom System 110
Soundness and Completeness 112
∗Natural Deduction Proof Theory for Propositional Logic 114
Gentzen and Natural Deduction 114
Motivation: Intuitionistic Logic 115
The Inductive Strategy 116

Genzen's Natural Deduction System....118
Examples of Theorems....119
Proof Theory for First-Order Logic....121
The Axiom System of Russell and Whitehead for FOL....121
Soundness and Completeness....122
An Example of a Theorem....123
*A Gentzen Natural Deduction System for FOL....123
Soundness and Completeness....125
Lecture 19. Truth-Tables, Algorithms and Decidability....125
Decidability....125
Effective Process....127
Skolem and Gödel on Recursive Functions....128
Definition of Recursive Function....132
Examples of RF's....132
Implications of Gödel's Definition for the Methodology of Logic....135
The Traditional Definition of Effectively Calculable Function....136
Church's Thesis....137
Decidable Sets in Logic....138
Syntactic Tests for Valid Syllogisms....139
The Truth-Table Test for Tautologies and Validities....140
The Undecidability of First-Order Logic....141
Summary....143
Appendices....146
Truth-Conditions of Selected Formulas....146
Categorical Propositions....146
First-Order Formulas....146
The Names for the Valid Syllogistic Moods....148
Mnemonic Poem for the Valid Moods and Reduction....148
Square of Opposition....149
Square of Opposition for Predicate Negations....150
Term Rules for Testing Whether a Mood is Valid....150
General Metatheorems on Logical Relations....151
Metatheorems on Categorical Logic....151
Metatheorems on Propositional Logic....153
Metatheorems on First-Order Logic....153
Summary of Exercises....155
Lecture 13....155
Lecture 14....155
Lecture 15....155
Lecture 17....156
Lecture 18....157
Review Questions....158
